## **Wombat Consulting Announces Island ITCH Feed Handler**

*Incline Village, NV - June 25, 2001* - Wombat Consulting, Inc., an independent software consulting and development company, announced today that it was adding an Island ITCH feed handler to its universal market data feed handler suite.

The Island ITCH feed provides order book information for Island ECN.

In addition to the basic Island order book, these feed handlers will publish price point summaries for all orders at a given price point. The price point summary contains the total number of buy and sell shares available at that price point, as well as the number of orders at that price point. Wombat's ITCH feed handler will publish one record for each price point. Each record will contain (at least) the following fields:

- Price Point
- Underlying Security Symbol
- Total Buy Volume
- Number of Buy Orders
- Total Sell Volume
- Number of Sell Orders

The Wombat ITCH feed handler will contain all of the usual configuration and administrative controls that are available to the rest of the universal feed handler suite. The release date for the Island ITCH feed handler is expected to be in early Q3, 2001.

For more information about the Wombat's market data feed handlers, please contact Wombat Consulting at +1.775.745.2100, or on the web at <http://wombatfs.com>.
