

## Susquehanna and Wombat Unveil Enterprise Agreement

Technology Provider Partners with SIG in SIG's continued Global Expansion

*Bala Cynwyd, November 27 2006* - Wombat Financial Software, the algorithmic trading platform experts, announced today a significant enterprise technology agreement with Susquehanna International Group, the brokerage, market making and investor pioneers. This partnership combines an immediate deployment of the Wombat Platform with an agreement to collaborate on the development of new Wombat technologies to support SIGs continued rapid expansion.

"Susquehanna has long distinguished itself, in large part, by the continual advancements we've made in the trading technologies our customers and internal businesses depend on," noted Gina Pinotti, Global Head of Software Development and acting CIO of SIG. "Having developed this relationship with Wombat over several years, we've recognized their ability to help us both realize immediate performance gains and continue developing a technology platform to propel our long term expansion. We find their results oriented, cutting edge culture highly aligned with our own."

"More than anything else, collaborative relationships with innovative customers allows technology companies to continually break new ground and deliver products and services that have a real impact," remarked Ron Verstappen, CEO of Wombat. "Partnering with SIG deepens our understanding of how to unlock more value for our customers and keep them in a position of advantage."

SIG will deploy Wombat's messaging and application integration platform in their enterprise to enable their trading applications with fast, richly textured market data. SIG will also build upon their existing installation of Wombat feed handlers by expanding them in number across multiple cities in the US, Europe and Asia. SIG is also set to leverage Wombat's SuperBook virtual order book consolidation server to capture liquidity across multiple venues in a single view.

The deal is a significant milestone in Wombat's emergence in the financial technology market. High frequency trading firms spanning the brokerage, hedge fund and market making sectors use the Wombat Platform to rapidly access deep pools of market data from the world's constantly evolving mix of trading destinations. Wombat's combination of the industry's largest selection of adaptors and performance engineered integration capabilities allow these firms to concentrate on trading strategy and execution, off-loading the complexities of market connectivity to Wombat.

### *About Wombat Financial Software*

Wombat enables limitless connectivity to the global markets through the world's most advanced high speed market data infrastructure, the Wombat Platform. With offices in the US and UK, Wombat software underpins automated market-making systems, electronic-trading floors and tick-capture platforms in financial institutions around the world. The Wombat Platform includes Wombat Feed Handlers, providing sub-millisecond connectivity to more than 80 direct exchange and aggregated vendor feeds; Wombat Transport, enabling high speed, multi-protocol messaging throughout the enterprise; Wombat APIs; and Wombat value added servers such as the Wombat SuperBook virtual order book consolidator and the Wombat DBAC tick-capture adapter.
