Wombat Announces Support for CTF, ComStock's New Message Protocol

June 12, 2006 - Wombat would like to inform you that we have released our feed handler for ComStock's new message protocol, ComStock Token Format (CTF), which provides a simple and effective data definition mechanism for ComStock's datafeed, PlusFeed (previously known as XpressFeed).

PlusFeed integrates real time data from over 350 sources and exchanges worldwide, covering in excess of 2.3million instruments. It has solid coverage of the U.S. domestic marketplace, as well as extensive international coverage including markets in Europe, Asia Pacific, Latin America, South America, and Africa.

For further detail on PlusFeed and its data coverage, visit Comstock's web site at: <http://www.comstock-interactivedata.com/xpressfeed.shtml>

The CTF protocol enables users of the Client Site Processor (CSP) to receive content from different exchanges using a uniform set of fields, which simplifies and expedites the integration of the ComStock datafeed into client applications.

A complete list of Wombat feed handlers is available on the web at: www.wombatfs.com/products/feedhandlers.htm [<http://www.wombatfs.com/products/feedhandler.htm>]
