## **Wombat Announces INET ITCH Feed Handler for Multicast**

*Aug 01, 2006* - Wombat would like to inform you that we have released a feed handler for the multicast version of INET ITCH, which supports retransmission requests as standard. It was introduced to further minimise latency and better cope with the future growth in market data volumes.

This vendor level feed provides real time order and execution data for NASDAQ NMS and SmallCap securities, as well as securities listed on NYSE and AMEX. For more details on INET ITCH visit: [www.nasdaqtrader.com/trader/tradingservices/productservices/productdescriptions/inet\\_overview.stm](http://www.nasdaqtrader.com/trader/tradingservices/productservices/productdescriptions/inet_overview.stm) [[http://www.nasdaqtrader.com/trader/tradingservices/productservices/productdescriptions/inet\\_overview.stm](http://www.nasdaqtrader.com/trader/tradingservices/productservices/productdescriptions/inet_overview.stm)]

Wombat has supported the TCP version of INET ITCH since 2001. Both versions of the INET ITCH feed handler are available on all market data platforms supported by Wombat. North American markets participants should note that Wombat also provides feed handlers for Bloomberg Tradebook, NYSE Arcabook and Arca FastFix.

A complete list of Wombat feed handlers is available on the web at: [www.wombatfs.com/products/feedhandlers.htm](http://www.wombatfs.com/products/feedhandlers.htm) [<http://www.wombatfs.com/products/feedhandler.htm>]
